Dani Yogatama

Cyprien

Lingpeng

Sebastian

Aida

# Background

State-of-the-art language models are based on increasingly larger transformers.

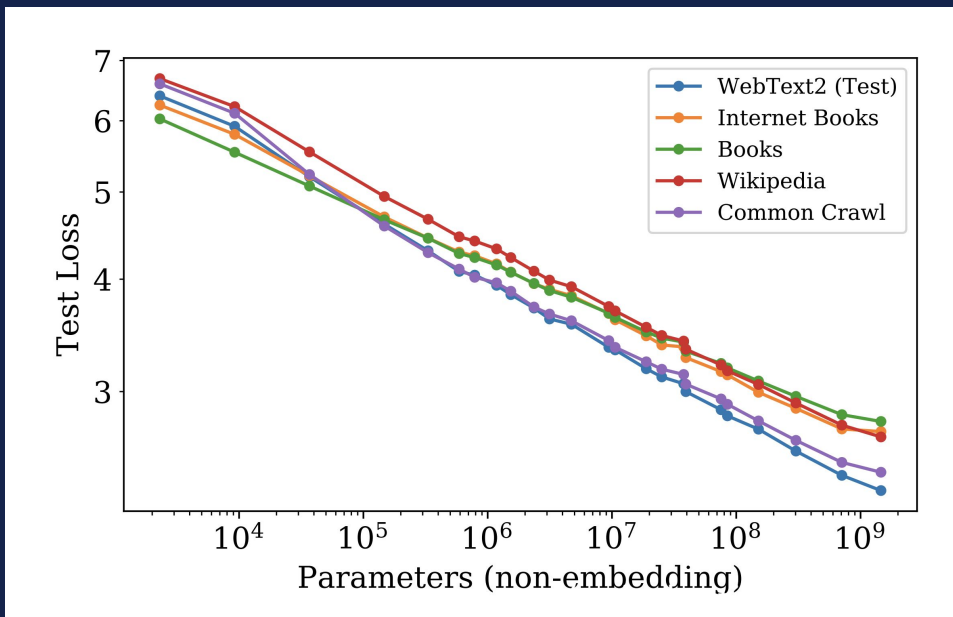

Figure taken from [State of AI Report 2020](#).

# Background

Kaplan et al., 2020

# Background

Kaplan et al., 2020

Do we need  
structures and/or  
inductive biases?

# Background

Knowledge is implicitly represented in the weights of a parametric neural network.

# Background

Knowledge is implicitly represented in the weights of a parametric neural network.

Interpretations via cloze-style questions (Petroni et al., 2020) or prompts (Brown et al., 2020).

Dante was born in [MASK] .

Q: Where was Dante born in?

A:

# Background

Transformers, no matter how large, are limited by the input sequence length.

# Background

Transformers, no matter how large, are limited by the input sequence length.

# Semiparametric Language Models

Separation of computation and storage as an architectural bias.

# Background

- Great progress, but current models overfit to a specific dataset (task) and often forget.

Yogatama et al., arXiv 2019

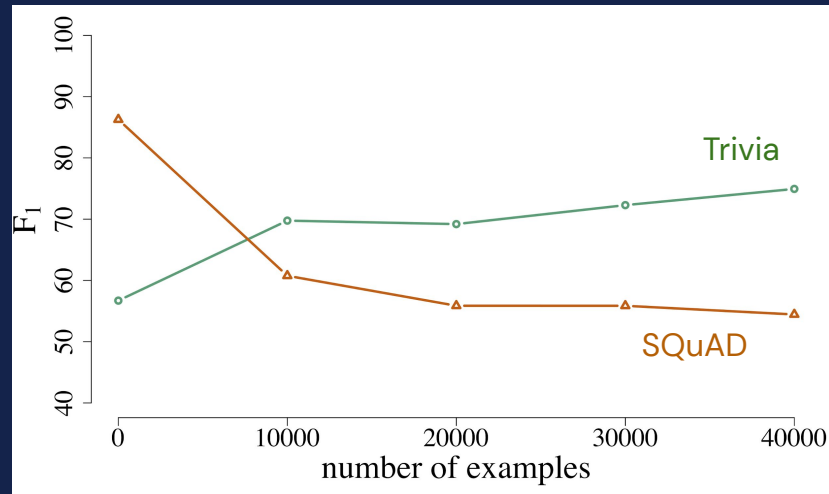

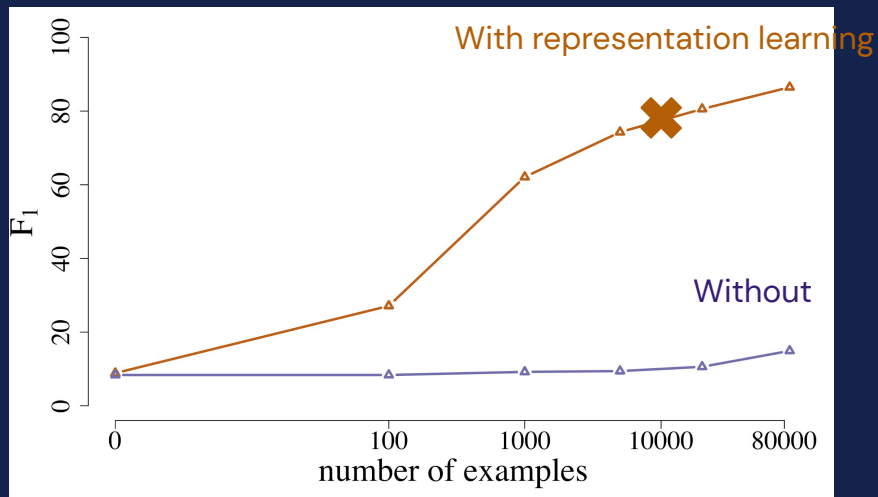

Model: BERT, [Devlin et al. 2019](#)

QA dataset: SQuAD, [Rajpurkar et al., 2016](#)

# Background

- Great progress, but current models overfit to a specific dataset (task) and often forget.

Yogatama et al., arXiv 2019

Model: BERT, [Devlin et al. 2019](#)

QA dataset: SQuAD, [Rajpurkar et al., 2016](#)

QA dataset 2: Trivia, [Joshi et al., 2017](#)

# Background

- A model should be able to reuse knowledge from related tasks to learn a new task faster.
- Current models not only fail to do this, they **catastrophically forget** previously learned tasks (McCloskey and Cohen, 1989; Ratcliff, 1990).

# Background

- A model should be able to reuse knowledge from related tasks to learn a new task faster.
- Current models not only fail to do this, they **catastrophically forget** previously learned tasks (McCloseky and Cohen, 1989; Ratcliff, 1990).

# Background

- A model should be able to reuse knowledge from related tasks to learn a new task faster.
- Current models not only fail to do this, they **catastrophically forget** previously learned tasks (McCloseky and Cohen, 1989; Ratcliff, 1990).

# Background

- A model should be able to reuse knowledge from related tasks to learn a new task faster.
- Current models not only fail to do this, they **catastrophically forget** previously learned tasks (McCloseky and Cohen, 1989; Ratcliff, 1990).

# Background

- A model should be able to reuse knowledge from related tasks to learn a new task faster.
- Current models not only fail to do this, they **catastrophically forget** previously learned tasks (McCloskey and Cohen, 1989; Ratcliff, 1990).

**Hypothesis:** episodic memory mitigates catastrophic forgetting in language learning.

# Takeaways and Limitations

- Episodic memory allows a language model to deal with changes in data distribution.

# Takeaways and Limitations

- Episodic memory allows a language model to deal with changes in data distribution.
- Linear **space complexity** in the number of examples, **constant** is more realistic.

% of stored examples in memory	10%	100%
Performance	61.5	62.0

# Takeaways and Limitations

- Episodic memory allows a language model to deal with changes in data distribution.
- Linear **space complexity** in the number of examples, **constant** is more realistic.

% of stored examples in memory	10%	100%
Performance	61.5	62.0

- Local adaptation at inference time is **computationally expensive**.

# Adaptive Semiparametric Language Models

Yogatama et al., in review

Dani

Cyprien

Lingpeng

# Background

- Existing memory-augmented language models are designed for one memory types.
- In language models, many tokens can be predicted from local context.

# Background

- Existing memory-augmented language models are designed for one memory types.
- In language models, many tokens can be predicted from local context.
- Goal: an integrated language model architecture that can adaptively decide when to use local context, short-term, and/or long-term memory.

# Background

- Existing memory-augmented language models are designed for one memory types.
- In language models, many tokens can be predicted from local context.
- Goal: an integrated language model architecture that can adaptively decide when to use local context, short-term, and/or long-term memory.

**Hypothesis:** encouraging each component to focus on a specific function results in a better language model.
